Rishon LeZion, Israel

SKILLS

Backend
Node.js, Express, REST APIs, Spring Boot, Spring Security, Hibernate/JPA

Frontend
Vue.js, React, JavaScript, HTML, CSS, Tailwind CSS

Languages
JavaScript, Java, Python, C, SQL

Databases
PostgreSQL, MongoDB

Cloud & DevOps
Docker, Docker Compose, Azure, Linux, Git

Testing & Automation
Jest, Playwright, JUnit, Selenium

APIs & AI
OpenAI API, Google Maps APIs, JWT, Swagger

Parallel Computing - 95

Compilation - 94

QA - 97

HCI - 96

Embedded Systems - 100

Statistics - 92

LANGUAGES

- Hebrew | Native
- English | Advanced

Software Engineering graduate (B.Sc., Afeka College) with a specialization in Cybersecurity. Builds backend services and full-stack web apps with Node.js, Express, Vue.js, React and Java/Spring Boot, backed by PostgreSQL or MongoDB and deployed with Docker.

Final degree project: SafeDLBuddy, a multi-service platform that downloads files from links, scans them with three antivirus engines and explains the result with the OpenAI API.

Seeking a junior backend or full-stack developer position.

PROJECTS

SafeDLBuddy: AI-Powered File Scanning System
Final Degree Project | 2024–2025 | Grade: 92 | Node.js, Express, Vue.js, Playwright, Docker, Azure

Users paste a link to a download page and get a risk verdict with a plain-language explanation.
• **Architecture:** three Dockerized services (Vue.js chat frontend, AI service, scanning service) run with Docker Compose and deployed on Azure.
• **Downloads:** handlers for Google Drive, Dropbox, OneDrive, MEGA, GitHub, direct links and torrents, using Playwright to reach the real file.
• **Scanning:** Bytescale, Cloudmersive and ClamAV combined into a weighted risk score that redistributes weights when an engine is down.
• **Reliability:** timeouts, retries, user cancellation and deletion of temporary files after each scan.
• **AI:** the OpenAI API routes each chat message (scan or explain) and explains verdicts using the latest scan results.
• **Testing:** about 75 Jest tests (functional, integration, security, load and regression).

AI Trip Planner
React, Tailwind CSS, Node.js, Express, MongoDB

Full-stack trip planning app: React pages for planning, saved trips and statistics, routes on Leaflet maps. Express API with JWT authentication, MongoDB aggregation for trip statistics, OpenAI and Google Maps integration, and Swagger docs.

Secure User Management: SQL Injection & XSS
Spring Boot, Spring Security, React

User management app built in a vulnerable and a hardened version; BCrypt hashing, password policy with lockout, email password reset.

LightSync: Smart Lighting Control
Team Project | Spring Boot, PostgreSQL

Backend REST API with about 20 endpoints, role-based access and paginated search, covered by 70+ JUnit tests.

IDF SERVICE

RF Technician, Maintenance Unit
Tzrifin Base | 2017–2019

Maintained and tested military electronic systems. Completed a Radar and Meteorology course. Used SAP for technical documentation and operations.

EDUCATION

B.Sc. in Software Engineering, Cybersecurity Specialization
Afeka College of Engineering, Tel Aviv | 2021–2025

Practical Engineer in Electronics
Afeka College of Engineering, Tel Aviv | 2015–2017
