SOFTWARE ENGINEER

# Shiraz Velber

## CONTACT INFORMATION

shirazwelber1124@gmail.com

052-385-5975

github.com/Shiraz1124

Rishon LeZion, Israel

## SKILLS

**Languages**
Java, Python, C, JavaScript, SQL, Assembly

**Backend**
Spring Boot, Spring Security, Hibernate/JPA, Node.js, Express

**Frontend**
React, Vue.js, Tailwind CSS

**Databases**
PostgreSQL, MongoDB

**Cloud & DevOps**
Docker, Docker Compose, Azure, Linux, Git, Gradle, Maven

**Testing**
JUnit, Jest, Selenium WebDriver, Playwright, Page Object Model

**Security**
SQL Injection & XSS prevention, BCrypt, JWT, password policies, Wireshark

**Parallel Computing**
MPI, OpenMP, CUDA

## RELEVANT COURSEWORK

Embedded Systems - 100

QA - 97

HCI - 96

Parallel Computing - 95

Compilation - 94

Statistics - 92

## LANGUAGES

- Hebrew | Native
- English | Advanced

Software Engineering graduate (B.Sc., Afeka College, 2025) with a specialization in Cybersecurity. Builds full-stack and backend systems with Java/Spring Boot, Node.js, React and Vue.js, backed by PostgreSQL or MongoDB and shipped with Docker.

Final degree project: SafeDLBuddy, an AI-powered platform that downloads files from links and scans them with three antivirus engines. Strong focus on secure coding and automated testing.

Seeking a backend or full-stack developer position.

## ACADEMIC PROJECTS

**SafeDLBuddy: AI-Powered File Scanning System**
Final Degree Project | 2024–2025 | Grade: 92

Users paste a download-page link; the system finds the real file with Playwright, downloads it in isolation and scans it with Bytescale, Cloudmersive and ClamAV. Built a weighted risk score that redistributes weights when an engine fails, plus plain-language explanations via the OpenAI API. Supports Google Drive, Dropbox, OneDrive, MEGA, GitHub and torrents. Built with Node.js, Express and Vue.js as three Dockerized services; about 75 Jest tests (functional, integration, security, load and regression).

**Secure User Management: SQL Injection & XSS**
Spring Boot, Spring Security, React

Built a vulnerable and a hardened version of the same app to demonstrate SQL injection and XSS attacks and their fixes (parameterized queries, safe rendering). Added BCrypt hashing, a configurable password policy with history and lockout after failed logins, and email-based password reset.

**LightSync: Smart Lighting Control**
Team Project | Spring Boot, PostgreSQL, Docker

Developed the backend REST API for a smart lighting system: about 20 endpoints, role-based access (admin, operator, end user) and paginated search over PostgreSQL, covered by 70+ JUnit tests.

**AI Trip Planner**
React, Tailwind CSS, Node.js, Express, MongoDB

Full-stack app that generates trip routes with the OpenAI API and Google Maps (Directions, Geocoding, Places), shows them on Leaflet maps and adds weather forecasts. JWT authentication, saved trips and statistics, REST API documented with Swagger.

**E-Commerce Test Automation**
Java, Selenium WebDriver, JUnit, Maven

Data-driven tests (JSON test data) for product search, cart, stock status, price filter and shipping options on a WooCommerce store, using the Page Object Model and Log4j2 logging.

## IDF SERVICE

**RF Technician, Maintenance Unit**
Tzrifin Base | 2017–2019

Maintained and tested military electronic systems. Completed a Radar and Meteorology course. Used SAP for technical documentation and operations.

## EDUCATION

**B.Sc. in Software Engineering, Cybersecurity Specialization**
Afeka College of Engineering, Tel Aviv | 2021–2025

**Practical Engineer in Electronics**
Afeka College of Engineering, Tel Aviv | 2015–2017
