Portfolio: shiraz1124.github.io

Rishon LeZion, Israel

SKILLS

Backend
Node.js, Express, REST APIs, Spring Boot, Spring Security, Hibernate/JPA

Frontend
Vue.js, React, JavaScript, HTML, CSS, Tailwind CSS

Languages
JavaScript, Java, Python, C, SQL

Databases
PostgreSQL, MongoDB

Cloud & DevOps
Microsoft Azure, Docker, Docker Compose, Linux, Git

Testing & Automation
Jest, Playwright, JUnit, Selenium

APIs & AI
OpenAI API, Google Maps APIs, JWT, Swagger

RELEVANT COURSEWORK

Parallel Computing - 95

Compilation - 94

QA - 97

HCI - 96

Embedded Systems - 100

Statistics - 92

LANGUAGES

- Hebrew | Native
- English | Advanced

Software Engineering graduate (B.Sc., Afeka College) with a specialization in Cybersecurity. Builds backend services and full-stack web apps with Node.js, Express, Vue.js, React and Java/Spring Boot, backed by PostgreSQL or MongoDB. Hands-on cloud experience deploying containerized services with Docker on Microsoft Azure.

Final degree project: SafeDLBuddy, a multi-service platform that downloads files from links, scans them with three antivirus engines and explains the result with the OpenAI API.

PROJECTS

SafeDLBuddy: AI-Powered File Scanning System
Final Degree Project | 2025–2026 | Grade: 92

An assistant that checks whether a downloadable file is safe: users paste a link and get a risk verdict with a plain-language explanation.
• **End-to-end design:** planned and built the system from scratch, including the architecture, backend services, REST API, and a responsive Vue.js chat UI designed for a simple user experience.
• **Backend & API:** Node.js/Express services for chat, downloads and scanning, with live progress sent to the UI over Server-Sent Events.
• **Browser automation:** Playwright automation navigates download pages to find and download the real file behind Google Drive, Dropbox, OneDrive, MEGA, GitHub, direct and torrent links.
• **Scanning:** Cloudmersive, Bytescale and ClamAV combined into a weighted risk score that adapts when an engine is down.
• **AI:** the OpenAI API routes each message (scan or explain) and explains verdicts from the actual scan results.
• **Cloud:** three Docker services run with Docker Compose and deployed on Microsoft Azure.
• **Testing:** about 75 Jest tests (functional, integration, security, load and regression).
Stack: Node.js, Express, Vue.js, Playwright, OpenAI API, Docker, Azure, Jest

AI Trip Planner
React, Tailwind CSS, Node.js, Express, MongoDB

Designed and built from scratch: an Express REST API with JWT authentication and MongoDB (aggregation for trip statistics), and a responsive React and Tailwind UI with planning, saved trips and statistics pages and routes on Leaflet maps. Integrates the OpenAI and Google Maps APIs.

Secure User Management: SQL Injection & XSS
Spring Boot, Spring Security, React

Designed the Spring Boot backend, REST API and React UI of a user management app, built in a vulnerable and a hardened version; BCrypt hashing, password policy with lockout, email password reset.

LightSync: Smart Lighting Control
Team Project | Spring Boot, PostgreSQL

Backend REST API with about 20 endpoints, role-based access and paginated search, covered by 70+ JUnit tests.

IDF SERVICE

RF Technician, Maintenance Unit
Tzrifin Base | 2017–2019

Maintained and tested military electronic systems. Completed a Radar and Meteorology course. Used SAP for technical documentation and operations.

EDUCATION

B.Sc. in Software Engineering, Cybersecurity Specialization
Afeka College of Engineering, Tel Aviv | 2022–2026

Practical Engineer in Electronics
Afeka College of Engineering, Tel Aviv | 2015–2017
